What the v2 entry rules saw, all session

Rebuilt from Alpaca's tick data with the live v2 settings, every 5 minutes from 9:45 plus the minutes of the bot's buys and sells — including the times the bot wasn't watching or the re-entry rule blocked it (the live log didn't record v2's numbers then). Small differences from the live values are expected (odd-lot prints), and a snapshot on the minute can differ from the live check a few seconds later (the live 12:29:11 buy passed every rule; this 12:29:00 snapshot still shows the smoothness below 0.7). The trade log (above) has the exact values at each buy.

Columns: **Watched** = on the live watchlist; **VWAP** = price vs VWAP; **RVOL** = volume so far ÷ 14-day normal by this minute; **15m_x** = last 15 minutes' volume ÷ normal; **Buy** = buy share of the last 15 minutes; **R²** smoothness and **Eff** straightness of the last 15 bars; **Open** = price vs today's open.
